

## Using the Index

In obtaining the recording for the sound of the names, it turned out to be more practical to have the speaker pronouncing the names in the Cyrillic alphabet order. For our viewers we were able to arrange the Tatar names in groups (the 12 shown above) following the Roman alphabet to make it easier. However, it was not possible to rearrange the spelling of the names within the letter groups.

Therefore, it was decided to develop an index to help locate more quickly the approximate place on the sound track where the name could be found. It is also true that many of the names are transliterated one way by some translators but slightly differently by others. That was another reason for developing the index. In using the index, the viewer can first try to locate the name visually. Or, the name can be found using a FIND command.

When the name is found, the entry shows the sex (M for Male), the index group, and the slide number. For example, look again at the example we gave before--

**Bakhtiyar (M)**  
**Бахтияр**  
**bahx-TEE-yahr**  
*bAx+ti-jAr*  
*Turkic 'Followed by chance.'*

In checking for the entry, first go to the letter group the name is in. In this case, Bakhtiyar is in the BCHDE Group in the 9<sup>th</sup> position. It is the 9<sup>th</sup> slide. Many of the names have alternate spellings. In you were looking up the name as spelled Bahtiyar. You would also be able to find it. It would also show in parentheses that it is an alternate spelling for Bakhtiyar.

Bagisa	F	BCHDE-5
Bahtiyar (Bakhtiyar)	M	BCHDE-8
<b>Bakhtiyar</b>	<b>M</b>	<b>BCHDE-9</b>
